SUMMARY

A passionate and driven Computer Engineering student, I excel in solving problems and am extremely hard working. I aim to design, test, and deploy innovative autonomous solutions, leveraging my engineering background and problem-solving skills to advance intelligent systems and optimize processes with technology.

My brain is a machine that inputs problems and outputs solutions.

EDUCATION

University of Massachusetts Amherst, B.S. Computer Engineering

2023 - Expected 2027

GPA: 3.1

Coursework: ECE 210 Circuits & Electronics, ECE 231 Intro to Embedded, ECE 241 Advanced Programming, ECE 322 Systems Programming, ECE 331 Digital Design, ECE 213 Signals & Systems, ECE 214 Prob & Stats, Physics I/II.

Labs: op-amp design/measurement; UART/I²C/SPI on MCUs; FSM & SPI master in Verilog; C systems programming on Linux.

PROJECTS

Project Wigand - 7" Quadcopter (Personal)

- Developed and optimized a long-range quadcopter, incorporating IMU/GPS and utilizing Betaflight/ArduPilot flight control systems. Future enhancements include transitioning to autonomous operation.

Embedded Lab Controller - AVR C (ECE 231)

- Proficiency in Beaglebone and Arduino C programming, Bash/Linux, circuit design and implementation, system control in C, and Pulse-Width Modulation (PWM).

Signal & Controls Minis (ECE 210)

- Modeled sensor/amp circuits in LTspice and replicated in the lab to confirm measurements. Familiar with soldering and lab observation equipment, utilized Python to analyze lab data.

PulsR AI GPT Access Portal

- Crypto wallet auth + paid access; Docker containers and CI on GitHub Actions.

EXPERIENCE

IT Student Consultant I, University of Massachusetts Amherst (Aug. 2025 -)

- Help students resolve login/account access issues and tech problems (password resets, Wi-Fi/printing/software), troubleshoot quickly, and escalate/forward to correct department when needed.

Resident Assistant, University of Massachusetts Amherst (Aug. 2025 -)

- Lead floor community by organizing meetings, building relationships with residents, and providing on-call support for lockouts, safety issues, and facilities coordination.

EffortlessHome, Software Intern, Summer 2024

- Designed a PHP auto-mailer for email input; utilized Docker for website and Home Assistant deployment; developed a Home Assistant plugin.

Customer Service (Dunkin', Starbucks, Shaw's) 2019–2025

- High-tempo team shifts; reliable and fast

CORE SKILLS

Embedded/EE: C/C++; AVR/STM32/ESP32; SPI/I²C/UART/CAN; LTspice; oscilloscopes/logic analyzers; soldering.

Software/Tools: Python, Bash, Git/GitHub, Docker, Linux, MATLAB, basic Verilog, CI (GitHub Actions).
